

All about 'Smartphones' – Automated Testing

Course – Software Testing and Quality Assurance

Abstract:

Web Technology TE Mini Project consisted of developing a website. For this, non-sponsored project by Jayesh Suryavanshi was made. The website acts as homepage for someone who wants to enter the world of smartphones giving them the insights of the current trends in the smartphone industry as well as making them familiar with their respective operating systems as well. Automated testing is done by using Selenium Chrome Web Driver for checking the navigation and proper function of website. This included link referencing, content loading, content timeout and form validation.
